e Specitical

In the Specification

Please amend the specification of this application as follows:

Rewrite the paragraph at page 1, lines 4 to 10 as follows:

--This application is a divisional of copending U.S. Serial No. 09/798,561 (Docket No. TI 30485) filed on March 2, 2001 and incorporated herein by reference. U.S. Serial No. 09/798,561 claims the priority under 35 U.S.C. 119(e)(1) of the following copending U.S. provisional applications: 60/186,326 (Docket TI 30526) filed on March 2, 2000; and 60/219,340 (Docket TI 30498) originally filed on March 2, 2000 as non-provisional U.S. Serial No. 09/515,093 and thereafter converted to provisional application status by a petition granted on August 18, 2000.--

Rewrite the paragraph at page 2, lines to 9 as follows:

--Functional testing, wherein a designer is responsible for generating test vectors that are intended to ensure conformance to specification, still remains a widely used test methodology. For very large systems this method proves inadequate in providing a high level of detectable fault coverage. Automatically generated test patterns would be desirable for full testability, and controllability and observability are key goals that span the full hierarchy of test (from the system level to the transistor level).-

Rewrite the paragraph at page 2, lines 10 to 17 as follows:

--Another problem in large designs is the long time and substantial expense involved. It would be desirable to have testability circuitry, system and methods that are consistent with a concept of design-for-reusability. In this way, subsequent devices and systems can have a low marginal design cost for testability, simulation and emulation by reusing the testability,
